CS 321 Human-Computer Interaction

Prototype Critique Session

Note to Instructors:

A peer critiquing session at this point in the semester helps the students get some feedback on their project designs and helps to give them an opportunity to apply their new design knowledge to other people's ideas.

It is important to set an atmosphere that is positive and non-threatening. Encourage the students to be constructive in their criticism. Since many people do not know the difference between constructive and destructive criticism this is a good opportunity to teach them.

Also encourage the student to recognize good ideas and design, not just problem areas. Remind them this is a cooperative learning experience not a competitive one.
